

# Downright Dangerous

by Jeremy James

There is much talk today of DNA, the basic code which defines in exquisite detail both the overall structure of an animal or an organism, and – most importantly – how it is assembled. The popular press dwells only on the overall design and fails to mention what is probably the most astonishing property of DNA, namely, its ability to build the body whose design it contains.

One really needs to step back for a moment and reflect on this. DNA is not just a plan, but a complex set of instructions on how to build the organism specified in the plan. And it doesn't stop there. The next property is every more remarkable. The DNA itself carries out the instructions and builds the organism specified in the plan.

## **Our schools never teach this**

Our schools never teach this. Instead, all three properties are combined into a single concept which greatly understates the truly extraordinary nature of what DNA is doing. Our children are told that the “secret” of genetics has been discovered and that science is now analyzing human DNA and building a massive database that will contain all there is to know about humanity.

Students graduate from college believing that the science of genetics is now potentially capable of solving any problem in biology, and that it will be possible one day to build a complete organism from nothing but a stock of inorganic molecules. This technocratic vision was given a boost recently when a team of computer scientists in the UK used an ingenious piece of software, based on Artificial Intelligence, to predict which way a protein would fold by analyzing its genetic structure. As mathematical problems go, this is about as hard as it gets. It was definitely a great scientific achievement, a problem which most scientists believed until recently would never be solved. But it is still dealing only with the “blueprint” or design aspect of DNA.

These scientists had worked out how to read the plan and tell in advance what the protein would do. After all, this is specified somewhere in the plan. But they learned nothing about the complex series of operations that must be carried out to arrive at the end result. Neither do they know anything about the way the DNA itself carries out these operations to build the protein in question.

### **Man’s pride-filled ambition**

We mention all of this merely to show that man, in his pride, has always reduced the miracle of creation – the work of God – to something that he might conceivably be able to do himself, using the tools of science and his ever-inventive imagination. This is the dream of Freemasonry, in whose philosophy God is seen as the ‘Great Architect’ of the universe, but not truly the sovereign Creator of all things, including the universal laws of physics and chemistry. It is also the dream of Gnosticism and Kabbalah, where man is portrayed as a “Co-worker” with God, a kind of junior deity without whom God cannot exercise His perfection.

The pharmaceutical companies are utilising the lie of science, so defined, as a way to justify their work on human DNA. The universities and colleges are teaching that life on earth, in all its diversity, is really a library of DNA codes and that, as the highest life form, we are entitled – by virtue of the plan encoded in our DNA – to modify and possibly improve upon those codes.

### **The four combined stages**

By grossly distorting what DNA really is they avoid being held accountable for the great harm they are doing when they change it. They don’t understand the purpose of each design (which is not even contained in the “plan”), and have no idea how the DNA is encoded with the steps to manufacture and assemble each element in the plan or how it actually carries out each of these steps.

We can visualize the problem like this: To build a car we need (i) a plan, (ii) all of the necessary component parts, and (iii) a properly equipped factory to carry out the work, and (iv) a team of workers to assemble the car who possess the skills and know-how to select the right components and put them together in the right sequence. Here we have 4 distinct stages. But DNA is more than just stage (i) – it is all four stages combined!

DNA is not just a plan – though this, of itself, is quite incredible – but a fully equipped factory, a team of skilled workers, and a tool shop for making and ordering in component parts.

### **What gene-based vaccines might do**

When a vaccine has been developed using genetic technology it has the potential to modify our DNA, RNA or both. If it alters our DNA, it affects all 4 stages described above, not just the “plan.” And if it alters our RNA, it affects at least two of these stages.

In our last paper (#256) we quoted a statement made on live television by Dr Sucharit Bhakdi, a world-renowned expert in the field of immunology and microbiology. When asked to comment on the safety of the Covid vaccines he replied, “They are downright dangerous.”

As we have shown in previous papers, modern science has been used to popularize a number of theories which are completely false. Evolution, for example, is mathematical nonsense, but because most people – including students of science – have only a poor grasp of ‘big numbers’ and what they mean in practice, they believe that virtually anything is possible if it can be expressed in mathematical terms. They don’t understand that mathematics, by itself, can prove nothing about reality. What it can do, however, is allow us to measure aspects of reality and see very precisely how those aspects fit together. So, when a scientist claims that his mathematical model “proves” something about the universe, he is either lying or deceiving himself. The truth of his claim can only be demonstrated experimentally.

The Elite know that people are easy to fool if you can get them to imagine something that is really really big, or really really small, or really really far away in space, or really really far away in time. For example, certain stars are “billions of light years away” – no they aren’t! And they are millions of times bigger than the earth – no they aren’t! And the universe is 13 billion years old – no it isn’t. And dinosaurs lived 60 million years ago – no they didn’t!

**“Their feet run to evil, and they make haste to shed innocent blood: their thoughts are thoughts of iniquity; wasting and destruction are in their paths.” – Isaiah 59:7**

Big lies make a big impression and they get results – take hold of our imagination – if they are repeated over and over again. After all, why would anyone say something so outrageous if it wasn't true?

The most recent big lie is about something that is really really small. Only the experts can see it and even they need a very expensive magnification device to do so. This really really small entity can travel anywhere and kill anyone. It exists in limitless numbers and covers the entire earth. And it's really really smart, changing shape from time to time and becoming even more deadly in the process. The only way to stop it is by using a vaccine which can potentially affect our DNA. (Really? Really!)

### **Keep repeating the lie**

There is plenty of evidence to support this lie. There always is. And there are plenty of experts to confirm that this really really small thing is wreaking havoc across the earth. There always are. So the lie rolls on, growing like a snowball and mopping up more and more 'believers' as it goes. Even strong-willed people with independent minds are unable to resist the endless onslaught of "evidence" which proves that this really really small thing is a danger to us all. After a while, the few who still have doubts – and the courage to voice them – are simply mocked and brushed aside.

Some scientists use their authority as supposed custodians of truth to bewitch the masses. When it is used in this way, science is the new religion and scientists are the new clergy. When Cardinal Fauci speaks, his words drift like perfume across the room. His congregants believe their feeble lives now hinge on their strict obedience to his inscrutable decrees. Those who disobey die.

### **Why genetic manipulation is never safe**

Scientists insist that genetic manipulation is safe, provided they adhere carefully to the necessary protocols, but the numbers say otherwise. Let's see why.

The number below is the hexadecimal key to a bitcoin owned by a woman we will call Judy.

E9873D79C6D87DC0FB6A5778639889F4453213303DA61F20BD67FC233AA33262  
13303DA61F20BD67F87DC0FB6A57786398DA61F20BD67F948673ADF467FEC456  
3AA33262ABE35F6798DA61F20BD67F948673ADF3AA33262ABD67F87DC0FBA61F  
13303DA61F20BD67F87DC0FB6A57786398DA61F20BD67F948673ADF467FEC456

No-one in the world knows this number except Judy. She stores it in an electronic wallet. If she loses the wallet she loses the bitcoin (unless she has a remarkable memory and can recall the sequence perfectly). No two people in the world have the same bitcoin key. Now, if someone wanted to steal Judy's bitcoin, they could do so by getting hold of her key. But they may have no way of doing so. Instead they could try guessing what her key might be and then sending it through the bitcoin system. But this would be futile, even if they used a super-fast computer to generate billions of 256-digit hexadecimal numbers. They could struggle for a thousand years and still fail to get at Judy's bitcoin.

Our genetic code contains millions of sequences just like Judy's key. Each key unlocks a process which uses another key to unlock another process, and so on. If this sounds unbelievably complicated, it is! There is no way a scientist can tamper with a structure of this complexity without doing harm.

### **‘Cut and paste’ is a dangerous game**

So what are the genetic scientists really doing? After all, some of their work delivers interesting results. In practice, they are not actually developing anything new but simply taking a slice of genetic code from one species and inserting it into another. They may have to do this thousands of times before they get a viable result. This is equivalent to stealing thousands of electronic wallets and hoping to find a bitcoin key in one of them.

In short, genetic scientists are tampering with the natural world and hoping to “find” something. They use very precise tools to perform functions that are crude and capricious. The scope for error is enormous and the chance of “finding” something that fits harmoniously with the rest of creation is zero.

Genetic engineering is a dangerous game. When the same technology is used to develop vaccines for humans, then, in Dr Bhakdi's words, the technology is “downright dangerous.”

We have gone to some lengths in this paper to show why Dr Bhakdi is right and why the worldwide use of humans beings as guinea-pigs for experimental gene-based vaccines is by far the most dangerous thing the political leaders of this world have ever attempted. The consequences for humanity in the longer-term are potentially catastrophic.

## **Mules and hybrids**

Domestic livestock breeders are familiar with the infertility that results when two closely related species interbreed. For example, when a male donkey (jack) mates with a female horse (dam), the resulting offspring, known as a mule, is – with very rare exceptions – infertile. This is true regardless of whether the mule is male or female. Interestingly, the mule itself is often longer-lived than its mother and more intelligent than its father. Furthermore, it is an efficient draft animal and was much used by miners, for example, before the advent of the combustion engine.

**Mule train hauling water tanks in California in 1903.**

When a male horse (stallion) mates with a female donkey (jenny) their offspring is known as a hinny. Whether male or female, the hinny is also infertile.

Bird breeders are also familiar with hybrids. For example, the goldfinch mule, which is a cross between a goldfinch and a canary, is highly prized for its beautiful song. And it too is infertile.

We have here examples of healthy and contented animals that live long and productive lives but which, due to a slight mismatch between the chromosomes of their two parents, will not be able to have offspring. You will notice that this mismatch does not impede or impair the animal in any way. The only discernible problem is one of infertility.

**“For they sleep not, except they have done mischief; and their sleep is taken away, unless they cause some to fall.”  
– Proverbs 4:16**

Human fertility has come under great stress in recent decades. Sperm counts and sperm motility among young men have fallen dramatically and many women have difficulty becoming pregnant or carrying a pregnancy successfully to term. It is generally believed that environmental pollutants are the principal cause of this decline. Perhaps the most insidious are synthetic chemicals which mimic human hormones.

**This beautiful bird is known as a Goldfinch Mule. It's a cross between a goldfinch and a canary. These birds generally enjoy good health and are quite hardy. There is one problem though – they are infertile.**

What will happen if, on top of this strain on human fertility, we add another, entirely new, kind of stress? Vaccines, by definition, are an assault on the body. They work by provoking our immune system to respond in a mild way to a pathogen and in doing so produce the antibodies that will enable it to respond effectively to future attacks by the same pathogen.

### **Reproductive risk**

We introduce an entirely new level of risk – and stress – when we use vaccines that impact minutely on processes taking place inside our cells. They may trigger genetic switches which, in themselves, have no adverse effect on our health but which could make it more difficult to become pregnant. Remember, hybrids are infertile because healthy genetic material from both parents failed to align correctly. Tiny genetic differences between the father and the mother can impede the highly sensitive biochemical processes which take place during fertilization. If the woman's body detects the presence of something unusual in the man's sperm, or in her own ovum as it interacts with the sperm, it may decide the risk is too great and shut down the fertilization process.

If this happens a women may never be able to become pregnant. Alternatively fertilization may occur but the resulting embryo later "fails" one of the many tests that the womb performs to ensure the health and viability of the unborn child. In short, a miscarriage occurs.

**"The proud have hid a snare for me, and cords; they have spread a net by the wayside; they have set gins for me. Selah."  
– Psalm 140:5**

There is also a possibility that a child is conceived and brought to birth, but in later life proves to be infertile (just like the hybrids that we have been discussing). This is pure speculation on our part, but the fact that we need to consider possibilities of this kind is itself a sign that gene-based vaccines are a radical departure from normal medicine. The risk may seem small but if a large proportion of the next generation turn out to be infertile, we will have destroyed our society – and all because of a virus that poses no threat whatever to the well-being of humanity.

## Sheep and Wolves

The Enemy is working hard to draw as many people as he can into the vaccine trap. Faith leaders – as they are called – are being conscripted to convince their congregations that the sceptics are fools and their concerns are exaggerated. Many true Christians will likely have been shocked by a video released by Amir Tsarfati on 30 December in which he shamelessly endorsed the vaccine agenda. Tsarfati is respected for his consistent espousal of fundamental Bible truth and his rejection of Replacement Theology. He has always tried to come across as a moderate, fair-minded individual with a deep knowledge of God’s Word. However, with this video, he revealed to Christians around the world that he works for the New World Order:

<https://www.youtube.com/watch?v=CWPkGh1rzx0&t=1779s>

After a slow, methodical ‘demolition’ of all the arguments against the vaccine, in the course of which he consulted two ‘experts’ whose patronizing opinions were treated as known scientific axioms, he ended his half hour presentation with these words:

“My hope and prayer is that these conversations that you’ve just heard will help you to have less fear, and more confidence in the written Word of God and the promises that He has for us.”

In short, if you trust the Word of God you’ll do as you’re told and take the vaccine. He claims to have undertaken, in effect, a Biblical examination of the issue and arrived at the only possible conclusion: God wants us to take the vaccine.

Anyone who listens to these 33 minutes of shameless propaganda will realize that the reputation of a valuable asset, namely Tsarfati himself, is being sacrificed for another purpose. It takes years to train an agent like Tsarfati, someone who can infiltrate the ranks of true believers and lead them down the road of Christian Zionism (See our paper #196). Only the best and the brightest get selected for a job like this. Tsarfati has proven to be one of their most effective performers. So why are they risking his reputation in this way by getting him to endorse a dangerous pharmaceutical product? Clearly his superiors believe it is of paramount importance that as many true believers as possible – a very high proportion – take the vaccine! If Tsarfati’s reputation gets damaged along the way, so be it.

### **A war against Christianity**

This is a war against Christianity. It has nothing to do with our health and well-being. Many other ‘faith leaders’, such as Al Mohler, are being brought in to spin similar tales of make-believe and beguile the unwary. They should be giving sound factual information about the risks involved, but they are doing the opposite. They should be drawing attention to the dangers identified by experts like Dr Sucharit Bhakdi, who has warned that these vaccines are “downright dangerous,” but they choose instead to mock these people and dismiss their evidence as hysterical pseudo-science.

Why are all these ‘faith leaders’ so keen to get the Evangelicals of America to take the vaccine? Because true believers are the greatest obstacle standing in the way of the New World Order. The Enemy wants us removed.

**“For among my people are found wicked men: they lay wait, as he that setteth snares; they set a trap, they catch men.”  
– Jeremiah 5:26**
